

Profile Lamp

The material for the light tube is PC (Polycarbonate). Which is impact resistance , moisture resistance and duct resistance. The size and shape of the tube can be designed according to customer's request.

Advantages of Profile Lamp :

Each LED can be RGB tricolor that means the color of each LED can be controlled individually.

Use of microcomputer as the controller. The color change and the display patent can be programmed. For buildings and outdoor signs , the controller can be used to display any patent or signs.

Long lasting life , LED can last for over 10,000 hours. This means less maintenance cost.

Low power consumption. consume only 3 to 13 watt for each tube. This means lower operating cost.
