

LED Modules

These series of led modules and spotlights stand out because of the integrated state-of-the-art LED-technology. "Luxeon TM LED light sources have the efficiency, power, durability and reliability which are necessary to live up to the promise of solid-state lighting. Not only are Luxeon TM the brightest LEDs, these light sources also offer an industry-leading lumen conservation in a mercury-free casing, without heat or UV-radiation in the light bundle. Nor do they contain synthetic resin, because that is susceptible to optic decay over a period of time, which results in a bad lumen conservation". (Source:Philips) The table underneath gives an overview of the available wavelength/ colourtemperatures and light yield of the applied Luxeon I & III leds.

Luxeon I

Type LED	LED-colour	Wavelength (nm) / Colourtemperature (K)	Luminous flux (lm)
Luxeon I	Red	625nm	44lm
Luxeon I	Amber	590nm	42lm
Luxeon I	Green	530nm	53lm
Luxeon I	Blue	470nm	16lm
Luxeon I	White	5000K	45lm
Luxeon I	Warmwhite	3500K	20lm

Luxeon III

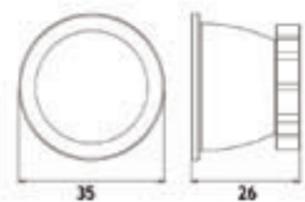

Type LED	LED-colour	Wavelength (nm) / Colourtemperature (K)	Luminous flux (lm)
Luxeon III	Red	627nm	140lm for 1,4A
Luxeon III	Amber	590nm	70lm for 1,4A
Luxeon III	Green	530nm	51lm for 700mA
Luxeon III	Blue	470nm	13lm for 700mA
Luxeon III	White	5500K	60lm for 700mA

Configuration possibilities and applications

Led-modules are available with different lenses, radiation angles, casings and light colours, which makes them suitable for many applications and which gives designers a lot of flexibility to look for the most creative and perfect light solutions. All modules are provided with a cooling device in order to control warmth optimally and guarantee quality. Most led-modules are also waterproof (IP67-65) which makes them the ideal solution for outdoors applications. There are specific connection material and special LED-drivers (350mA/700mA) and dimmers available for the use and application of the the led-modules.

LED Module 15 - warm white

'Pré Wonen' in Velsbroek, The Netherlands, has been designed by KCAP and are modern business premises encased in a copper front combined with white concrete frames. Two large openings in the front, together with the atrium guarantee enough daylight inside the building. The openings, of which the entrance is one, have been illuminated in a special way, using 744 warmwhite LED Modules with a 15 degrees lens. The modules were built into the woodwork of the openings using a profile that holds the modules. The entire set-up is dimmable.

LED Module - warm withe

Primo Exposures executed this project (Business park West Rotterdam The Netherlands). The Tri-O-Light transformers and led-modules have been built into ready-made fixtures, placed in the windows. In order to light the windows beautifully up, each fixture contains 6 warmwhite led-modules, including a built-in transformer.

LED Spotlights

This series of spotlights stands out because of the integrated state-of-the-art LED-technology. “Luxeon TM LED light sources have the efficiency, power, durability and reliability which are necessary to live up to the promise of solid-state lighting. Not only are Luxeon TM the brightest LEDs, these light sources also offer an industry-leading lumen conservation in a mercury-free casing, without heat or UV-radiation in the light bundle. Nor do they contain synthetic resin, because that is susceptible to optic decay over a period of time, which results in a bad lumen conservation”. (Source:Philips) The table underneath gives an overview of the available wavelength/ colourtemperatures and light yield of the applied Luxeon I & III leds.

Luxeon I

Type LED	LED-colour	Wavelength (nm) / Colourtemperature (K)	Luminous flux (lm)
Luxeon I	Red	625nm	44lm
Luxeon I	Amber	590nm	42lm
Luxeon I	Green	530nm	53lm
Luxeon I	Blue	470nm	16lm
Luxeon I	White	5000K	45lm
Luxeon I	Warmwhite	3500K	20lm

Luxeon III

Type LED	LED-colour	Wavelength (nm) / Colourtemperature (K)	Luminous flux (lm)
Luxeon III	Red	627nm	140lm for 1,4A
Luxeon III	Amber	590nm	70lm for 1,4A
Luxeon III	Green	530nm	51lm for 700mA
Luxeon III	Blue	470nm	13lm for 700mA
Luxeon III	White	5500K	60lm for 700mA

Fixtures and applications

The leds have been built into several fixtures and are available with different lenses, radiation angles, casings and light colours, which makes them suitable for many building applications and gives huge flexibility. All modules are provided with a cooling device in order to control warmth optimally and guarantee quality. Most led-modules are also waterproof (IP67-65) which makes them the ideal solution for outdoors applications. There are specific connection material and special LED-drivers (350mA/700mA) and dimmers available for the use and application of the the led-modules.

Mini Flood adjustable - warm white

The "Van Speelklok tot Pierement" museum, Utrecht (The Netherlands).  
 A total of 64 Mini Flood Lights - tilting have been installed in this museum. These paper dolls were made in 1870 and are not allowed to be exposed to UV radiation. Fire safety regulations also state that the spotlights are not allowed to create too much heat. The Mini Flood Lights radiate only a minimal amount of UV and are fitted with a cooling device to deliver optimal heat control.

LED Downlight 110 - various colours

The Vredenburg-theater in Utrecht (The Netherlands) used downlight spotlights with a Luxeon I led (1W). Using leds of different colours creates a playful effect in the smoking area.

### MCPCB

#### MCPCB (Metal Core Printed Circuit Board)

The MCPCB series is one of 6 different modular led-prints with integrated ultra bright high power leds (Luxeon I). These modular light sources have many possible uses and will inspire product designers and architects to provide ideal and creative solutions.

All MCPCBs are available in the colours red, amber, green, blue, white and warmwhite. The 3xLuxeon I MCPCB is also available in RGB finish. The leds on the standard MCPCB have a 140-degree radiation angle. This can be adjusted to a 10 or 45-degree radiation angle by using an acrylic lens. In the chart below you will find more information on the available wavelengths/ colour temperatures and light output of the integrated Luxeon I LEDs.

LED	Colour	Wave length (nm) / Colour temperature (K)	Luminous flux (lm)
Luxeon I	Red	630nm	44lm
Luxeon I	Amber	594nm	42lm
Luxeon I	Green	525nm	53lm
Luxeon I	Blue	470nm	16lm
Luxeon I	White	5500K	45lm
Luxeon I	Warm white	3000-3500K	20lm

In order to guarantee quality, the prints have a 'Metal Core' structure. For optimum heat control, steady light output and a long lifetime it is essential to use a MCPCB in combination with a cooling device, which is available on request. Other MCPCB configurations, like RGB, are available on request. The recommended PCB temperature is 55°C.

The MCPCB comes with solder connection points and is connected to a LED Driver. The chart below provides an overview of the technical specifications such as the power, number of solder connection points and compatible LED Driver per MCPCB.

Product code	No. LEDs	Power (W)	No. connection points	LED Drivers
MCPCB8	8	8W	1 (for 1x8 Luxeon I)	1 (350mA)
MCPCB3	3	3W	1 (for 1x3 Luxeon I)	1 (350mA)
MCPCB3 RGB	3 (RGB)	3W	3 (for 3x1 Luxeon I)	1 (Dimmer/Driver)
MCPCB6	6	6W	1 (for 1x6 Luxeon I)	1 (350mA)
MCPCB12	12	12W	2 (for 2x6 Luxeon I)	2 (350mA) of 1 (700mA)
MCPCB24	24	24W	3 (for 3x8 Luxeon I)	3 (350mA)

LED Drivers

LED Drivers

The Luxeon I class of LED Modules & Spots need 350mA or 700mA output current. Several LED Drivers have been developed and they are protected against overload, short-circuit, overheating and over-voltage. The chart below shows an overview of the different classes of drives and applications.

Product code	Description	Output current	Input voltage	Application
010861	LED Driver	350mA	230VAC	1-8xLuxeon I
010865	LED Driver	700mA	230VAC	1-12xLuxeon I/ 1-4xLuxeon III
010851	Cable Driver	350mA	12-34VAC/DC	1-7xLuxeon I
010847	Driver Rectangular	350mA	12-36VAC/DC	1-9xLuxeon I
010849	Driver Round	350mA	230VAC	1-6xLuxeon I
010859	Driver Round	350mA	12-36VAC/DC	1-9xLuxeon I
010853	Miki Driver	350mA	230VAC	1-6xLuxeon I
010855	Miki Driver	700mA	230VAC	1-2xLuxeon III
010867	Dimmer/Driver	350mA	12-36VAC/DC	1-9xLuxeon I

Connection

Note that you are working with an electrical device. Make sure the LED Driver is not connected to the 230V power supply when connecting the LED modules. This could severely damage the LED or cause a malfunction, shortening its lifetime considerably!

LED Connection materials

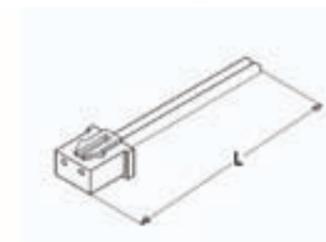

Nearly all Luxeon I and III modules and spotlights come with a 250mm 0.5 teflon cable without connector. Especially for this series of products we have plug & play connection articles available to create a serial connection. The connection cable provides the led-module or spotlight with a connector. The so-called joint clips are used to connect the cables. The connecting block series switch connects the spotlights. The endpiece series switch closes the series.

current controlled

RGB/Dim Controller

Note	RGB and/or dimfunctions
Dimensions	L185xW160xH70mm
Input	7.5V-36V
Control	by means DMX512 or 2 standard programmes
Output	350mA or 700mA per output (3 outputs)
Housing	aluminium
Connection	DMX IN, DMX UIT, OUT 1, 2, 3
Weight (g)	860g
Packing	per piece
To be used with	Luxeon I and Luxeon III LED modules en spots, 24VDC power supply
Dimmable	488Hz PWM, 15-bit resolution
Degree of protection (IP)	IP20
Product code	Description
010809	RGB/Dim Controller (current controlled) [pc]

LED Controls

Tri-O-Light has developed a current controlled RGB/Dim Controller. This advanced RGB/Dim Controller is suitable only for Luxeon I (350mA) or III (700mA input current) leds. The RGB controller has 3 controlled exits that can be charged with a maximum current of 350mA or 700mA each. The RGB/Dim Controller is standard pre-set on 350mA. Tri-O-Light pre-sets the RGB/Dim Controller on 700mA on request. The paragraph 'connection schemes' shows an overview of the connection possibilities of the current controlled RGB/Dim Controller.

Control

The exits of the RGB/Dim Controller are controlled with a DMX512 panel or a very easy to use wall panel with remote control. The RGB/Dim Controller contains two standard demo programmes, which Tri-O-Light can pre-set at your request. When the dimmer/driver is used, the leds need to be controlled using an analogue 0-10V signal.

Description  
Twinkle Controller, 24VDC/350mA [pc]

**Wiring diagrams**

RGB/Dim Controller set on 350mA (standard)

**Wiring diagram 1**

3 series of 1-8xLuxeon I (1W); 1 series per output.

**Wiring diagram 2**

1 series of 1-8xMCPCB3-140RGB (3W); red, blue, green, each colour on one output.

RGB/Dim Controller set on 700mA (non - standard)

**Wiring diagram 3**

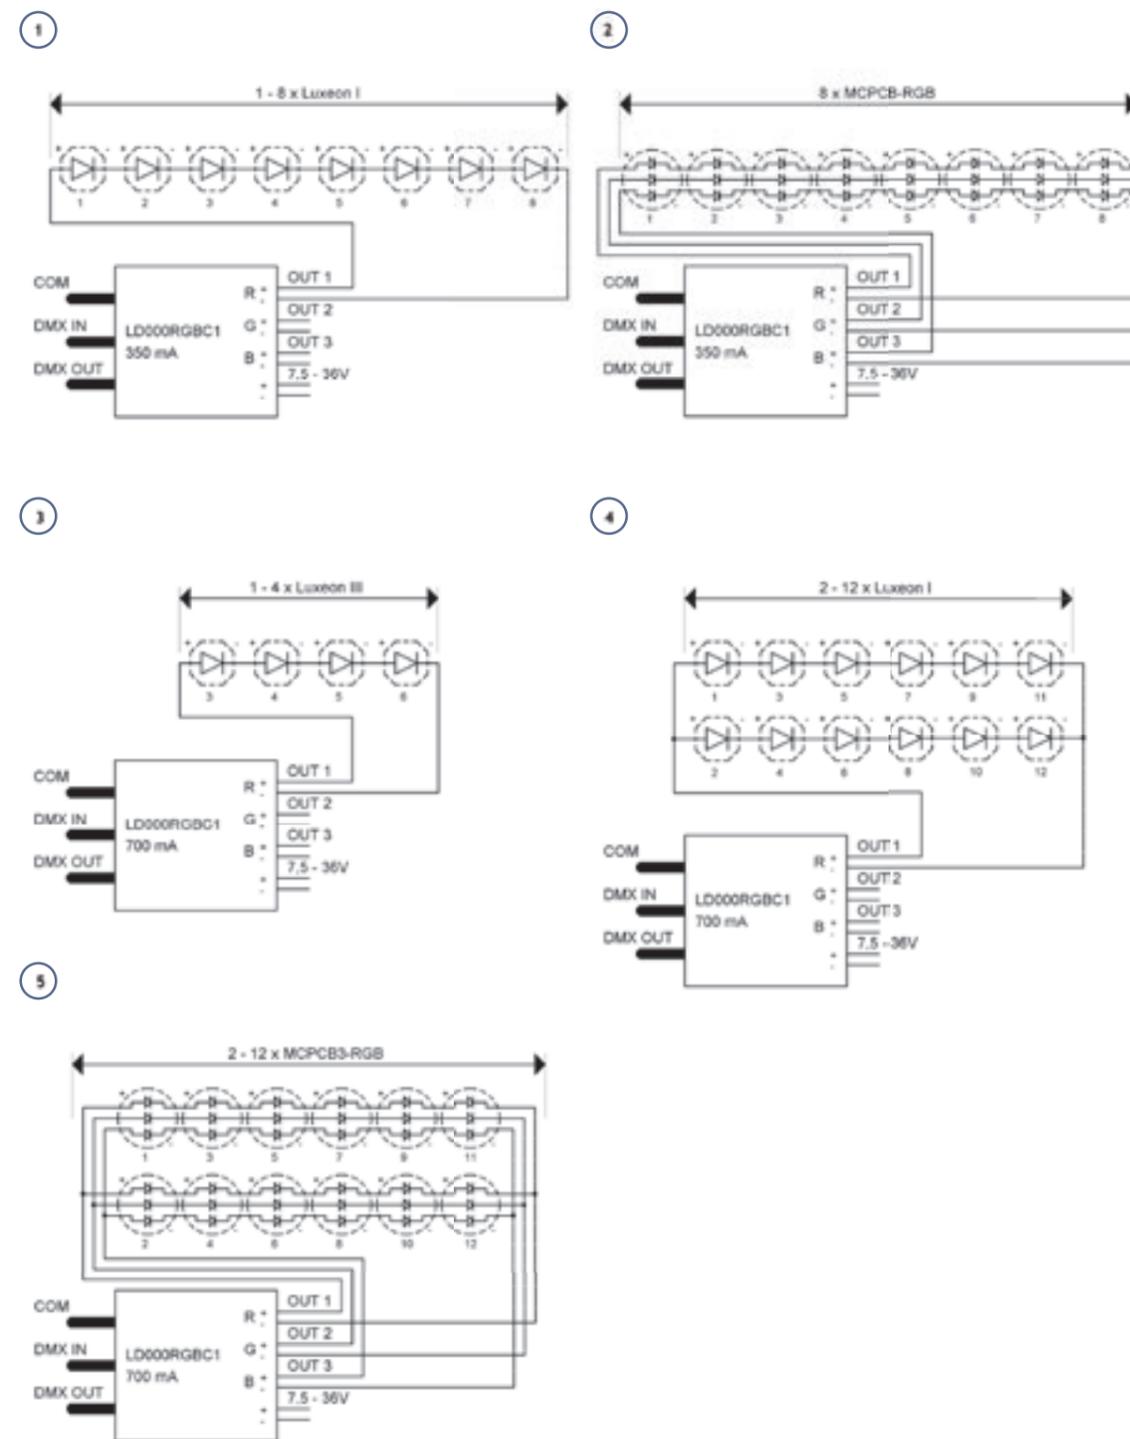

3 series of 1-4xLuxeon III (3W); 1 series per output. Only connect even numbers; i.e. 2 or 4 LEDs per series.

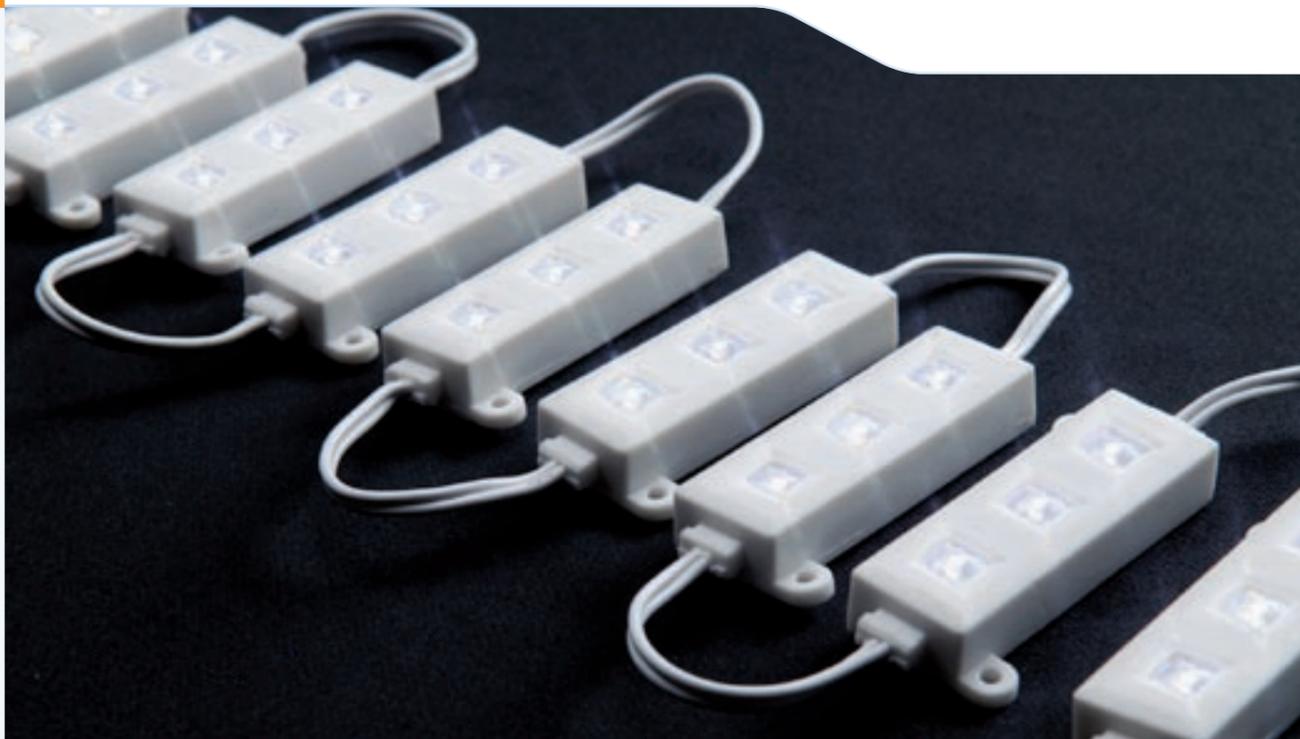

**Wiring diagram 4**

3 parallel series of 2-12xLuxeon I (1W); 1 series per output. Only connect even numbers; i.e. 2, 4, 6, 8, 10 or 12 LEDs per series.

**Wiring diagram 5**

1 series of 2-12xMCPCB3-140RGB (3W); red, blue, green, each colour on one output.

### Chain LED System

#### Chain LED System

The Chain LED System is a Luxeon led fixture which is ideal for advertising lighting and is suitable for various architectural applications. The Chain LED System provides outstanding brightness and light output.

#### Features

- the best choice to substitute neon
- very user- and installation friendly
- high power Luxeon leds
- stylish appearance
- balanced light diffusion
- Several bright colours available: red, amber, green, blue and white
- IP65
- Solid and shockproof

#### Benefits

- Maintenance free
- Long life time
- Non-UV
- Low running cost
- Low voltage and safe in use
- Adapts to moisture and wet environment

#### Applications

- Advertising boards
- Frame lighting
- Indirect lighting in outdoor application
- Stair lighting
- Shopwindow lighting
- Etc.

#### Mounting

The space between the Chain LED System and the acrylic needs to be 80mm for optimum diffusion of the light. The space between each module also needs to be 80mm. Each unit can be attached using screws or double-sided tape included in the kit.

Use the included waterproof joint clips to join the cables and the included transformer to supply the Chain LED System with the right voltage (15VDC). The maximum cable length between the led-system and the power supply is 20m, except for white, where 10m is applicable

#### Warning

Note that you are working with an electrical device. Make sure the device is not connected to the 230V power supply when connecting it. This could severely damage the led or cause a malfunction, shortening its lifetime considerably!

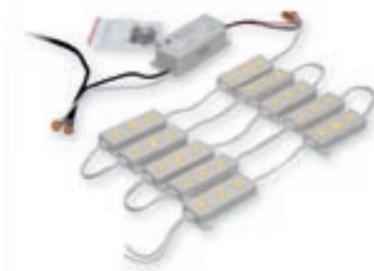

Chain LED System comes as a complete kit, including IP66 transformer and connection- and fitting materials.

**LED Cabinet Light**

The Cabinet Light, with integrated white or warmwhite highpower leds (Luxeon I), provides outstanding brightness and light output. This unique fixture is available in 3 lengths: 300mm (3 leds), 600mm (6 leds), 900mm (9 leds). The frosted acrylic cover distributes the light evenly, resulting in a beautiful light effect. The fixture also includes optimum heat control and mounting clips for easy installation.

**Application**

The Cabinet Light is a very stylish and flexible solution for cabinet lighting, showcase and desk lighting, indirect ceiling lighting, kitchen, bathroom and office lighting.

**Accessories**

The Cabinet Light comes standard with connection cable and is easily connectable. The 230VAC/24VDC power supply and extension cable are available separately.

Wall spotlights

These wall spotlights are suitable as decorative and orientation lighting in various wall applications. The fixtures are reliable and durable because of the aluminium housing in combination with stainless steel. The fixtures are waterproof (IP67/68) and therefore ideal for outdoor applications. These wall spotlights are suitable for installations where mounting a transformer is a problem. The transformer is integrated so the spotlight can be connected directly to 230VAC. The LEDs have a soft warmwhite colour in combination with diffuse glass.

LED Underwater spotlights

These LED Underwater spotlights are especially suitable for cosy lighting in several underwater and outside applications, such as fountains and swimming pools, ponds, garden lighting and water features. They each contain 9 Luxeon I leds which together offer a powerful spotlight like light bundle, lighting up objects perfectly.

The fixtures are reliable and durable using a heavy brass casing and 8mm toughened glass. The fixtures are 100% waterproof (IP68) and stainless. The spotlights are connectable. You can use Tri-O-Light Y-joints to make waterproof connections. The fixtures must be used with a 12VDC power supply, installed in a dry place.

The standard underwater spotlights are available with different radiation angles, sorts of glass (clear/diffuse) and the led-colours red, amber, green, blue, white and warmwhite. It is also available in RGB with a standard RGB programme which neatly and calmly changes the colours.

We also have available an advanced RGB underwater spotlight, enabling you to mix fascinating colours. Using several light programmes and fixed colour adjustments you can create the right atmosphere. This underwater spotlight is controlled with the Tri-O-Light current controlled RGB Controller through a DMX512 panel or a very easy to use wall panel with remote control. This product is available with both clear and diffuse glass.
