

SimOSD

OSD Module for DVB Dream

Installation :

- 1/ Extract the content of this archive in the Modules directory of DVB Dream. (ie : C:\DVBDream\Modules)
- 2/ Start DVB Dream and go to Modules / Module List, uncheck DDOSD and check SimOSD.
- 3/ Restart DVB Dream... Et voilà ☺

Version 1.0 (2007/01/07)

Functions:

- Display Channel Info window after each channel switch. Can also be displayed each time you press I key on your keyboard.
- Display Volume window after each volume change. Volume is displayed with a level from 0 to 20.
- Display live recording indicator with duration.
- Channels from Remote Channel List can be selected by number (using numeric keys on keyboard), the selected channel number is displayed at the top of the screen. (Remote Channel List must be filled with correct channel number).

Version 1.1 (2007/01/11)

New:

- Display Current and Next EPG when moving mouse cursor at the top of the screen (in the first 80 lines of the screen): Left = Current & Right = Next
- Display file size during live recording (displayed near record duration)
- Display Renderless and Mute messages when those modes are activated.
- Display a message after each display mode change (Normal, TV Window or Fullscreen)

Version 1.1.1 (2007/01/21)

New:

- EPG in Russian language display issue fixed. Should also fixe issue with other language (to be confirmed)
- Automatic update for EPG data. No need anymore to change or refresh channel to update EPG display on OSD at status-bar.
